

FAB PROJECT

An interconnector to provide electricity between France and Britain via Alderney

INVITATION TO HAVE YOUR SAY

The team behind the project to build the 220-kilometre France-Alderney-Britain electricity interconnector invites you to visit one of our public consultation events to seek your views on the proposed subsea and underground cable route and converter station.

The project will provide cheaper electricity, energy security and a future route to market for predictable tidal stream energy from Alderney.

Members of the team will be on hand to guide you through the exhibition material, answer any questions, and seek your views on the proposals. Responses from the public will inform the final decision on the route and on the application to build the converter station near Exeter International Airport.

Please feel free to drop in any time between 2pm and 8pm at:

Temple Methodist Church Hall, Budleigh Salterton	Tuesday 26th July 2016
Younghayes Centre, Cranbrook	Wednesday 27th July 2016
Woodbury Park Hotel, Woodbury	Thursday 28th July 2016

Comments are invited on our detailed proposals which will be available to download from www.fablink.net and to view at Budleigh Salterton Library during the consultation period which runs from 25th July until 5th September 2016.
